

Go Channels check out gotut 12.go for the code and detail as text.

Iterating Channels

but it returns no

but it returns nothing in terminal, why?

- All goroutines are off running and the program is finishing before they come back.

So, we need the syncronize thing.

- After we add wg.Add(), wg.Done(), wait(), it still has error. Then we add buffer to fooval: = make ((han int, 10)) because our (hannels block each other. but we know the amout of (hannels (10)).

So, we can control our flow.

*Note that buffer has to be > amount of channels

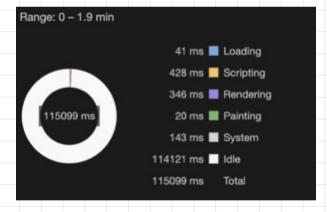

ex. For this case, buffer = 10,50,... ?

buffer = 5 (X)

Web app Concurrency

From last webapp (gotut 7.go), we inspect insignt its performance. And it took around 1.9 mins (on my machine) to load. In our case, I was loading a massive table but the "idle" time was taking 115 seconds which is not good. So, we need some modifications

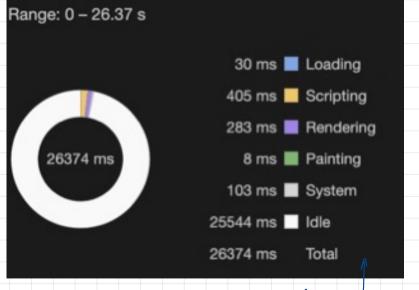

time where browser is just waiting for a response, "golang's time" every time we visit / Aora, it's repulling all of the sitemaps

"How to modify with go routines"

90 tut 13.90

and it went like this

* another way to improve the time faster is adding a real pagination than

พ่เภท้าคือรับ พรอมกัน 1400 entries จะมาแบ่งเป็น หาราง หลปลุ ไม่ใต่ REAL
